jemshitbahadurov3@gmail.com

GITHUB

github.com/Jemsit0300

LOCATION

Turkmenistan

SKILLS

Backend & API

- Python Django Django REST Framework
- RESTful API Design Auth & RBAC
- Model Translation

Databases

- PostgreSQL SQL Query Optimization

Infrastructure

- Ubuntu / Linux Docker Docker Compose
- Nginx Gunicorn SSH / Server Admin
- Reverse Proxy

Tools

- Git & GitHub Postman

LANGUAGES

Turkmen — Native

Russian — Fluent

English — Professional

PROFESSIONAL SUMMARY

Backend Developer specialized in **Python**, **Django**, and **Django REST Framework**, with production experience building and deploying multilingual, data-driven REST APIs. Skilled in **PostgreSQL** schema design and query optimization, and comfortable owning a project end to end — from data modeling and API design to production deployment with **Nginx** and **Gunicorn** on Linux servers.

EXPERIENCE

Backend Developer

Oguzhan University

Aug 2025 – Present

- Architected the backend foundation for an academic management system covering teacher journals and student grading workflows, using Django and DRF.
- Developed secure, modular RESTful APIs supporting core academic operations across admin, teacher, and student roles.
- Implemented authentication and role-based access control to protect data across user roles.
- Optimized PostgreSQL queries and data-access patterns, improving responsiveness and reducing bottlenecks as data volume grew.
- Added backend validation and API security controls to strengthen data integrity and reliability.

SELECTED PROJECTS

Academic Management System

E-University

Production

- Built backend services and RESTful APIs to centralize teacher journals, student grading, and institutional workflows.
- Implemented authentication with role-based access for admin, teacher, and student users.
- Improved platform performance through PostgreSQL query optimization and efficient data-access design.
- Collaborated with a team on Git/GitHub — feature branches, merges, and pull requests.

- Python Django DRF PostgreSQL

Tour Agency Backend

Production

- Designed and built the backend and REST APIs for a tour agency platform covering tour packages and bookings.
- Added booking functionality allowing customers to select and reserve tour packages, with role-based access for admin and customer users.
- Used Django Model Translation to deliver multilingual tour-package content.
- Customized the Django Admin panel and deployed to production with Nginx, Gunicorn, and PostgreSQL.
